PROFESSIONAL SUMMARY

Information Technology Engineering student with hands-on experience building scalable backend systems, cloud-native applications, and full-stack solutions. Proficient in Java, Python, C++, and JavaScript, with practical exposure to Spring Boot, Django, Node.js, and AWS cloud services. Demonstrates strong problem-solving skills through multi-threaded systems programming, REST API design, and microservices architecture.

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript, TypeScript, SQL

Frameworks & Libraries: Spring Boot, Django, Node.js, Express, React, Hibernate/JPA, Celery, Java Swing

Cloud & DevOps: AWS (EC2, Elastic Beanstalk), Git, Maven, Linux, Docker (familiar)

Databases: MySQL, Redis, H2

Protocols & Concepts: REST APIs, Multithreading, TCP/IP, Apache Kafka, JWT, Microservices

EDUCATION

B.Tech. in Information Technology

Aug 2024 – May 2028

Manipal Institute of Technology (MIT), Manipal, Karnataka

EXPERIENCE

AWS Cloud Intern — *Internship Studio*

Jan 2024

- Configured ROS2 on Ubuntu within AWS EC2, enabling remote robotics simulation in a cloud environment.
- Deployed full-stack applications on AWS, managing SSH setup, security groups, and package dependencies.
- Developed scalable deployment workflows using Elastic Beanstalk with instance management best practices.

PROJECTS

Deep Packet Inspection Engine | C++17 · Multithreading · PCAP · TCP/IP

Jan 2026

- Engineered a C++17 DPI engine to parse PCAP traffic and analyze Ethernet, IP, TCP, and UDP packet layers at wire speed.
- Extracted TLS SNI and HTTP Host headers to classify domains; implemented five-tuple flow tracking and a rule-based real-time traffic blocking engine.
- Designed a multi-threaded packet processing pipeline using worker threads and thread-safe queues for concurrent throughput.

FlameDesk — Cloud Kitchen Management System | Node.js · Express · MySQL · React · TypeScript

Apr 2026

- Architected a full-stack operations dashboard for managing a cloud kitchen business, featuring real-time order tracking via a Kanban board and multi-brand revenue analytics with interactive chart visualizations.
- Designed and implemented inventory management with automated stock-level alerts and configurable thresholds to minimize downtime.
- Built and secured REST APIs using JWT-based authentication, ensuring stateless, role-restricted access to kitchen data.
- Integrated an AI Insights module powered by the Claude API that generates natural-language business recommendations and a dynamic Kitchen Health Score derived from live operational data.

Online Banking System | Python · Django · Celery · Redis · Tailwind CSS

Dec 2025

- Developed a Django-based banking web application supporting account creation, deposits, withdrawals, and multiple account types (savings and current) with configurable transaction limits per account type.
- Automated monthly interest calculation using Celery scheduled tasks backed by Redis as a production-grade message broker, ensuring reliable background task execution.
- Implemented a date-range-filtered transaction history report module with server-side validation and responsive Tailwind CSS UI.

CERTIFICATIONS

JPMorgan Chase Software Engineering Virtual Experience — Forage

Jan 2026

Built a Spring Boot microservice integrating Apache Kafka, JPA/Hibernate, and REST APIs with transaction persistence.

AWS Solutions Architecture Virtual Experience — Forage

Jan 2026

Designed a fault-tolerant, auto-scaling AWS Elastic Beanstalk architecture optimized for high-traffic production deployment.
